1. A telephone call was made to Mr. Carl Wesolowski on 12/7/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

The inventions are distinct, each from the other because of the following reasons:

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21 and 23-24 are drawn to a communication terminal with a folder part that moves between a first and second position relative to the body part and a camera, protrudes and inserted within the mobile communication terminal, classified in class 455, subclass 575.3, 550.1 and 379/433.13.
- II. Claim 22 is drawn to a hinge camera and hinge connecting the first and second part, a camera holder in the hinge and camera lens and exposed the camera in a predetermined angle, classified in class 396, subclass 345, a photograph apparatus.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because are distinct in utility. The subcombination has separate utility such as an apparatus for taking a photograph.

Inventions I and II are related as process of making and process of using the product. The use as claimed cannot be practiced with a materially different product. Since the product is

not allowable, restriction is proper between said method of making and method of using. The product claim will be examined along with the elected invention (MPEP § 806.05(i)).

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions and different utility.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
